Metal detection in solution by new mass-spectrometrical method

Tuesday, 20 April 2010 11:45 (20 minutes)

New method - extraction ions from solution at atmospheric pressure - analog of well-known ESI-MS method was proposed for analysis of metals in radioactive solutions. Advantages of this method to compare with known methods - (ICP-MS, ICP OES, ESI-MS etc.) - small volume of sample, high sensitivity, possibility of automatization.
