## **Radioactivity concentration in soil samples taken from region of Banja Luka (Bosnia and Herzegovina)**

*Monday, 19 April 2010 11:45 (20 minutes)*

Surface soil samples (0-15 cm) were collected from the region of Banja Luka (Bosnia and Herzegovina), in order to evaluate their radioactivity. Concentrations of radionuclides in samples were determined by  $\gamma$ -ray spectrometer using HPGe detector. The obtained results of uranium and thorium series as well as potassium K-40 and Cs-137 activity concentrations are discussed. The radioactivity levels are compared with the results from other countries.

**Primary author:** Mr ŠTRBAC, Bojan (Radiation Protection Centre)

**Co-authors:** Ms MARINKOVIĆ, Jelena (Radiation Protection Centre); Mr MILAKOVIĆ, Milomir (Radiation Protection Centre)

**Presenter:** Mr ŠTRBAC, Bojan (Radiation Protection Centre)

**Session Classification:** Poster Session - Radionuclides in the Environment, Radioecology

**Track Classification:** Radionuclides in the Environment, Radioecology
