

# **A guide to understand collectivity in small systems (for dummies)**

*Friday, 18 January 2019 10:15 (50 minutes)*

Measurements of anisotropic flow provide an important insight into the nature of collectively expanding hot and dense strongly coupled matter in heavy-ion collisions. Over the past years, striking similarities were revealed in numerous experimental results measured in high-multiplicity proton-proton and proton-lead interactions, where no emergence of such a medium was expected. Investigation of the origin of these phenomena in small systems will be presented in a detailed and explanatory way. The aim of this talk is that everybody will eventually understand the above abstract.
