## Th(IV) removal from aqueous solutions by oxidized biochar prepared from palm tree fibers

*Tuesday, 17 May 2022 16:05 (5 minutes)*

### Abstract

The removal of Th(IV) from aqueous solutions by oxidized biochar fibres derived from palm tree fibers (OBF) has been investigated at pH 3 and under ambient conditions by batch type experiments and FTIR spectroscopy. The experimental data have shown that the Th(IV) adsorption by OBF is well fitted by the Langmuir isotherm model ( $q_{\max} = 0.18 \text{ mol kg}^{-1}$  or  $42 \text{ g kg}^{-1}$ ), is an entropy-driven process and follows the 2nd order kinetics. Furthermore, FTIR spectroscopic data have indicated that the sorption occurs via formation of inner-sphere complexes between Th(VI) and the carboxylic surface moieties.

### Keywords

Th(IV) adsorption; biochar fibers,  $q_{\max}$ ; kinetic parameters; mechanism
